HTTP Basic Access Authentication

- Method for HTTP user agent to provide username and password with a request
- Server can challenge a client to authenticate itself
- Client needs to send the username and password in response

Basic Access Authentication

Authorization Header

- The *Authorization* header is constructed as follows:
 1. Username and password are combined into a string "username:password".
 2. The resulting string literal is then encoded using Base64.
 3. The authorization method and a space, i.e. "Basic " is then put before the encoded string.

Authorization: Basic QWxhZGRpbjpvcGVuIHNlc2FtZQ==

Express and Authentication
